DETAILED ACTION

Response to Amendment

1. The preliminary amendment filed November 5, 2001 and the supplemental preliminary amendment filed January 3, 2002 have been entered. The specification has been amended.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 3-4 depend on claim 89, which does not exist.

In claim 3, the meaning of the phrase: "the serendipity probability a measure of probability that..." is unclear.

The scope of claims 3-4 is so unclear that the Examiner could not conduct a reasonable search of the prior art. Thus, the Examiner did not make a prior art rejection to claims 3-4 in this Office Action.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2177

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. **Claims 1-2, 5-8 are rejected under 35 U.S.C. 102(e)** as being anticipated by Fayyad et al. (US 6,633,882 B1), hereinafter “Fayyad”.

As per claims 1, 5, 6, Fayyad teaches a computer-assisted method for evaluating a cluster assignment for an observation, comprising:

- “for each of a plurality of observations, obtaining a data set containing no more than one proxy value for each of a plurality of variables, each variable having a plurality of possible values” at Col. 5, table 1;
- “the data set also containing a cluster assignment for the observation, the cluster assignment identifying one cluster from a plurality of clusters” at Col. 5 lines 45-55;
- “for each observation from the plurality of observations, calculating a percent of proxy values for the plurality of variables that equals a mode of that observation's corresponding cluster's proxy values for the corresponding variables” at Col. 9 line 64 to Col. 10 line 25;
- “outputting the percent for each observation” at Col. 9 line 64 to Col. 10 line 25.

As per claims 2, 7, 8, Fayyad teaches a computer-assisted method for evaluating a cluster assignment for an observation, comprising the activities of:

- “for each of a plurality of observations, obtaining a data set containing no more than one proxy value for each of a plurality of variables, each variable having a plurality of possible values” at Col. 5, table 1,
- “the data set also containing a cluster assignment for the observation” at Col. 5 lines 45-55;
- “for each observation from the plurality of observations, estimating a purposeful probability that a particular possible value from the plurality of possible values for a particular variable will be purposefully provided by observations assigned to a particular cluster from a plurality of clusters” at Col. 21 line 60 to Col. 22 line 18; and
- “outputting each purposeful probability” at Col. 22 lines 10-18.

Conclusion

5. The prior art made of record, listed on form PTO-892, and not relied upon, if any, is considered pertinent to applicant's disclosure.
